

Ciptex AI: The Intelligent way to revolutions enterprise operations

This AI is something different!

Ciptex AI stands out in the crowded AI marketplace, offering a robust and comprehensive AI framework that seamlessly integrates leading generative AI models with your enterprise knowledge and applications. This powerful solution operates within your own secure public cloud environment, ensuring unparalleled data protection.

AI Advise

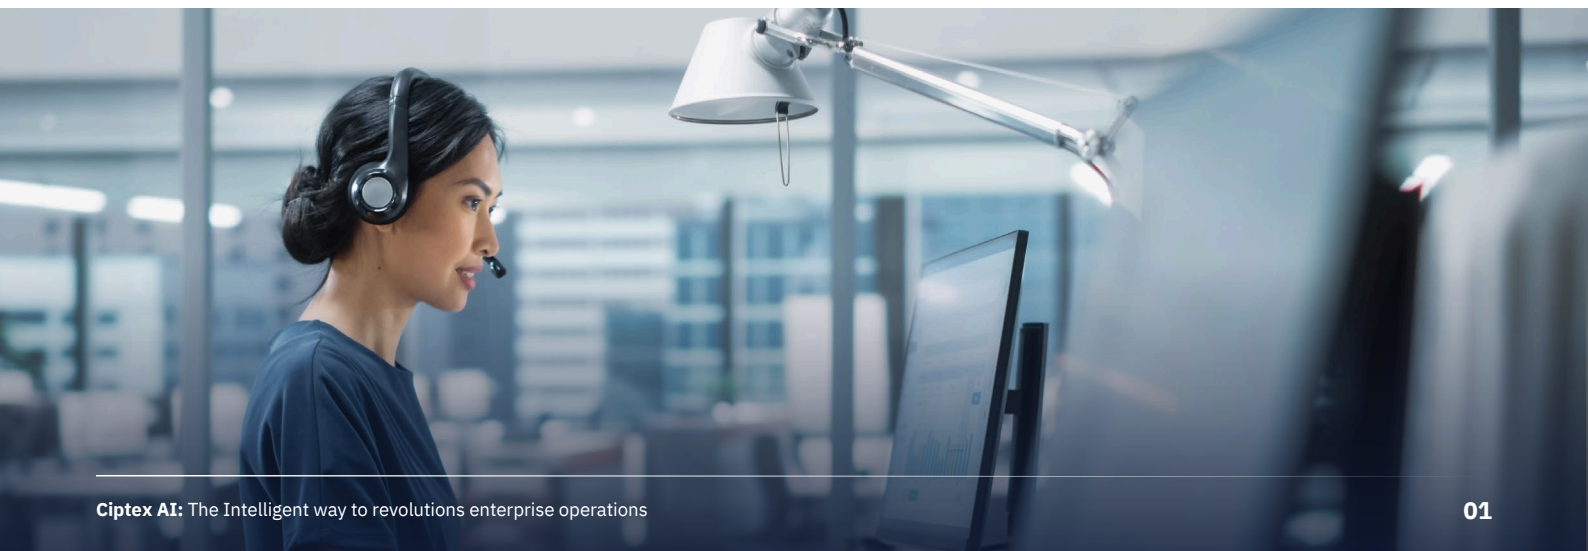

Enhance customer, agent, and supervisory experiences with natural language comprehension, reasoning, and generative content derived from approved and organized enterprise knowledge—not internet scrapings. Use these capabilities to provide agent-assist co-pilots that continuously learn from human feedback, promoting candidates for fully automated omnichannel messaging and voice journeys via AI-powered bots and IVRs.

AI Automate

Equip Ciptex AI with the knowledge required to perform common tasks in customer and staff journeys. It will know when, how, and what information and permissions are needed to complete tasks, collecting the necessary data and even performing tasks on your behalf.

Responsible AI

Designed with a fundamental commitment to protect customers and staff, Ciptex AI leverages the principles of responsible AI. These principles include Accountability, Inclusiveness, Reliability, Safety, Fairness, Transparency, Privacy, and Security.

The Power of Ciptex AI Applications

Colleague Assistance Tools

From frontline staff to remote field engineers, empower teams with real-time access to contextual AI-generated knowledge and suggestions during customer or task interactions. Automate summaries, dispositions, and actions. Implement process suggestions and automations using AI-trained tools that understand how to complete required tasks.

Quality and Safety

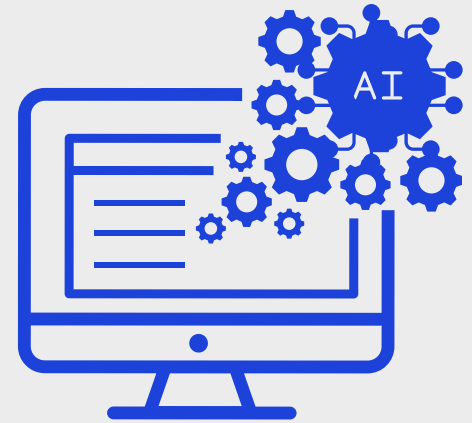

Conduct real-time and post-interaction assessments of colleague and AI interactions, providing alerts and feedback to ensure the highest quality of service. Deliver empathetic and supportive responses, especially for the most sensitive customer scenarios.

Customer Facing Solutions

Deploy real-time natural language IVRs for customer interactions. Utilise omnichannel chatbots and rich application experiences powered by your private enterprise AI data and learned tools.

Flexibility and Future-Proofing

Understanding that the AI landscape is rapidly evolving, Ciptex AI adopts a flexible framework approach. This ensures you are not locked into any particular AI provider. Instead, you can choose from leading and even multiple providers to ensure the best fit for each purpose at the right cost. This adaptability guarantees that your AI solutions remain cutting-edge and cost-effective, capable of evolving with advancements in technology.

Developer Access

Ciptex AI offers a rich set of APIs, enabling your developers to configure, integrate, and extend its capabilities into other corporate and customer-facing applications, both inside and outside the contact center.

Ciptex AI is not just another AI product. It's a transformative tool designed to enhance the efficiency and effectiveness of your enterprise, ensuring better service delivery while maintaining rigorous information security standards. Embrace the future of enterprise operations with Ciptex AI.

This version is suitable for a broader range of industries while still highlighting the unique features and benefits of Ciptex AI.
